

PROJECT DATA

Project: Orica Limited
Project Location: 1 Nicholson St, Melbourne
Project Description: Commercial Office, Tower 8 Levels inclusive
Client: Walton Constructions
Architect: Bates Smart Architects
Supplier/Installer: Verosol Australia
Product Type: Roller Blind Ambience System with Metallised SilverScreen Fabric
Quantity: 350

Arguments in favour of choice made

- SilverScreen sun and glare protection, Durability of project, Aesthetical Appeal.

Main selection criteria

- High performing metallised blind fabric that delivers excellent sun control, without compromising the view out (offering semi-transparency) for occupant comfort and working efficiency.

Problem definition

- Building occupants are high profile commercial clients who required a roller

blind fabric that delivered quality glare control and outside view in a variety of colours to suit individual interiors, without compromising the building's external appearance.

- A fabric with a backing that maintained the buildings' appearance, but offered interior colour choice and delivered superior heat and glare control for building occupants.

Requirements of client/architect

- Aesthetically pleasing SilverScreen colour (Chocolate) to complement internal colour tones, whilst protecting internal occupants from heat and glare.

Solution

- Fabric that greatly reduces the harmful effects of solar heat and glare whilst still maintaining a semi-transparent view out.
- Highly fire retardant with anti-static properties to maintain a clean appearance
- Variety of interior colours in various transparencies.
